## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to apparatus with cylinder with openings, multi-port connector, pressure reading means, valve, pressure relief, plugging means attached to opening, classified in class 73, subclass 40.
- II. Claims 10-19, drawn to method measuring gas generation potential including charging an apparatus, sealing apparatus, placing in temperature controlled bath, recording pressure data, analyzing pressure data to determine pressure changes, classified in class 73, subclass 19.01.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the apparatus may be used for other purposes such as leak testing containers within the cylinder.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
